

Notice to Juab County Residents from

Juab County Mosquito Abatement

Date: June 4, 2019

Due to increased moisture this season we anticipate record levels of mosquito populations. The Juab County Mosquito Abatement Department has been involved in early treatment methods, focusing on the greatest problem areas in our county. Our goal is to reduce both Adult and Juvenile Mosquitoes which pose a public health threat and nuisance.

The Mosquito Abatement Department will be performing all methods of Mosquito Abatement efforts throughout the remainder of the Mosquito Season.

However, due to the increase in standing water areas we anticipate high levels of mosquitoes as temperatures rise. Residents can personally reduce the number issues by removing any temporary standing water from their properties.

We encourage Residents to use mosquito repellent, during morning and evening dusk hours, throughout the warm summer months.
